American Express

Analytics, Investments and Marketing Enablement (AIM)

Subject: Application for Analyst-Data Analytics (Job ID: 26012927)

Dear Hiring Manager,

The engine powering commercial customer acquisition relies on precise audience targeting, seamless digital experiences, and the ability to turn raw data into strategic marketing action. As a candidate pursuing an Int.MSc in Computational Statistics and Data Analytics, with deep expertise in Python, SQL, and applying emerging AI capabilities to transform digital outcomes, I am thrilled to apply for the Analyst position within the Paid Media, Affiliates & Cobrand Analytics team.

I am passionate about designing scalable analytical solutions to navigate complex business questions. While engineering my **Demand Forecasting System**, I leveraged robust machine learning models—including XGBoost and K-Means—to drive advanced audience segmentation and experimentation. By evaluating test structures and analyzing large datasets, I developed actionable strategies that optimized acquisition funnels and improved targeting accuracy. This directly mirrors the strategic experimentation required to optimize media performance across Amex's digital ecosystem.

Furthermore, I thrive in environments that challenge the boundaries of digital intelligence. By building an **AI Workflow Automation Platform**, I championed the application of emerging GenAI techniques. I built semantic modeling capabilities and automated insights to drastically enhance analytical productivity and targeting precision. Managing these capabilities required operating effectively within dynamic, fast-paced environments, partnering with cross-functional teams to ensure business impact, and clearly communicating strategy implications to stakeholders.

My commitment to continuous improvement extends deeply into the broader engineering community. By successfully resolving 13+ issues and submitting 17+ pull requests to prominent open-source repositories—such as **Uber's CausalML** (a premier causal modeling library)—I have demonstrated my ability to build sophisticated analytical frameworks and collaborate on a global scale. As a certified Google Generative AI Leader, I am uniquely equipped to future-proof your digital acquisition engine.

I am eager to bring my strong problem-solving skills and passion for digital marketing analytics to American Express to help drive advanced audience targeting. I welcome the opportunity to discuss how my expertise in ML models and GenAI can make an immediate impact on your team.

Thank you for your time and consideration.

Sincerely,

Sujith S
