American Express

Credit and Fraud Risk (CFR)

Subject: Application for Analyst Data Governance & Management (Job ID: 26013007)

Dear Hiring Manager,

A single decision can have many outcomes. When that decision affects millions of card members and merchants, the underlying data must be pristine, secure, and impeccably managed. With a strong foundation in Computational Statistics, deep expertise in Google Cloud and Python, and a proven track record of solving complex unstructured problems, I am thrilled to apply for the Analyst Data Governance & Management position on the CFR team.

My career has been built on taking end-to-end ownership of critical data assets and leveraging cutting-edge technology to drive innovation. While engineering my **Real-Time Stock Market Data Pipeline**, I acted as the primary custodian for data standardization and data quality. I utilized Big Data technologies (Apache Kafka, PostgreSQL) to manage massive, high-throughput financial data sets, ensuring that the integration processes were robust enough to support critical downstream decisions—a challenge directly analogous to minimizing the disruption of good spending while combating fraud.

Furthermore, I thrive in environments that challenge the status quo. By building an **AI Workflow Automation Platform**, I focused heavily on integrating **GenAI** techniques to bring immense scale and enhanced productivity to complex initiatives. Managing these world-class data products required operating effectively within large cross-functional teams, partnering with designers, engineers, and end-users to build new capabilities while rigorously maintaining existing assets.

My deep commitment to data integrity and innovation extends beyond my personal projects. By successfully resolving 13 issues and submitting 17 pull requests to prominent open-source projects like **Uber's CausalML**, I have honed my ability to collaborate at an enterprise level and build strong relationships with diverse stakeholders. I am also a Google Generative AI Leader and certified in Google Cloud Computing Foundations, making me uniquely equipped to innovate using your preferred cloud and AI stacks.

I am eager to bring my strong analytical skills and risk-first mindset to American Express to help drive profitable business growth. I welcome the opportunity to discuss how I can leverage GenAI, Python, and SQL to effectively manage your enterprise data assets.

Thank you for your time and consideration.

Sincerely,

Sujith S
