Hiring Team, Controllers Division

Goldman Sachs

Bengaluru, Karnataka, India

Dear Hiring Team,

I am writing to apply for the Industrial Trainee position within the Controllers division at Goldman Sachs, Bengaluru. As a student pursuing an Integrated MSc in Computational Statistics and Data Analytics at VIT University (2022-2027), with a published research paper on financial market analysis and a strong foundation in quantitative methods, I am eager to contribute to a team responsible for the accuracy of financial and regulatory information at one of the world's leading financial institutions.

What draws me specifically to Controllers is the intersection of analytical rigour and real-world financial accountability. My academic work in Financial Analytics and Statistical Modeling has given me a clear appreciation for why accuracy in financial reporting is non-negotiable – an error in a model or a data pipeline is not merely a technical failure but a failure with direct business and regulatory consequences. This mindset shaped how I approach every analytical deliverable I produce. My [peer-reviewed paper](#) on stock market analysis and prediction, published in the 14th El Ruha International Conference Proceedings (2025), reflects this: I designed feature engineering stages for financial time-series data, benchmarked multiple predictive models against real market regimes, and produced reproducible, documented results – work that mirrors the rigour Controllers applies to financial and regulatory reporting.

Beyond financial markets research, I have built end-to-end analytical systems where accuracy and cross-functional communication were critical. My Demand Forecasting System produced business planning outputs – resource allocation forecasts with confidence interval estimates – reported to stakeholders through structured pipelines. My HR Workforce Intelligence Platform translated workforce cost and utilization data into internal reporting dashboards for decision support. In both cases, the deliverable was not the model itself but the accurate, trustworthy output that business partners could act on. This is precisely the role Controllers plays: ensuring the firm's financial and regulatory information is correct, complete, and communicated clearly.

I thrive in collaborative environments. At CropSky, a university-incubated research startup, I worked alongside research scientists and engineers to turn analytical outputs into production-ready reporting features – a process requiring both technical precision and the ability to communicate clearly across disciplines. I bring the same collaborative approach to everything I work on, and I would embrace the opportunity to learn from Goldman Sachs' experienced Controllers team while contributing meaningfully from day one.

I am confident that my quantitative background, financial markets knowledge, and commitment to analytical accuracy make me a strong candidate for this program. I welcome the opportunity to discuss how I can contribute to the Controllers division during the off-cycle period.

Thank you for your time and consideration.

Sincerely,

Sujith S
