**American Express**

Enterprise Platforms (Technology)

**Subject: Application for Software Engineer II (Job ID: 26012791)**

Dear Hiring Manager,

Joining Amex Tech means shaping contributions into something big—a mission that resonates deeply with my journey as an engineer. With a proven track record of architecting scalable, distributed systems and an unwavering commitment to backing the broader engineering community, I am thrilled to apply for the Software Engineer II position on the Enterprise Platforms team.

American Express explicitly values a commitment to open source, which aligns perfectly with my engineering philosophy. I have actively resolved 13 complex issues and submitted 17 pull requests to major open-source repositories, including [Uber's CausalML](#), [scikit-learn-contrib](#), and [Grafana](#). This collaborative environment taught me how to express dissenting opinions constructively, conduct rigorous code reviews, and build safely extensible codebases.

In my professional and project work, I specialize in the exact technologies that power your Global Accounts Receivable and Money Movement systems. To solve latency issues in financial analytics, I engineered a [Real-Time FinTech Data Pipeline](#). By implementing an event-driven architecture with **Apache Kafka** and **PostgreSQL**, I ensured the system could reliably process high-throughput, asynchronous API events while maintaining strict SLAs.

Furthermore, I understand that building the next generation of technical capabilities requires modern developer tools. While developing my [AI Workflow Automation Platform](#), I leveraged **GenAI tools (like GitHub Copilot)** to massively accelerate the delivery of robust microservices, Webhooks, and Redis caching layers. I thrive in cross-functional agile teams, whether it involves mentoring less experienced developers at my startup (**Shoot the Breeze**) or collaborating closely with Product Owners to refine complex Epics into actionable engineering tasks.

An opportunity to build highly testable, intuitive, and distributed applications at American Express represents the perfect environment to grow my career. I am excited by the prospect of powering the global capabilities of your essential customer segments while upholding your 175-year brand promise of trust, security, and service.

Thank you for considering my application. I would welcome the opportunity to discuss how my expertise in distributed systems, asynchronous API design, and open-source collaboration will make an immediate impact on your agile team.

Sincerely,

**Sujith S**
