Summary

Computational Statistics and Data Analytics student at VIT University (2022-2027) with hands-on experience executing structured test procedures, capturing and reporting defects, and delivering accurate, on-time results under quality guidelines. Applied knowledge of QA methodology, regression testing, and test case execution across software builds and data pipeline components; experienced in systematic defect documentation, status reporting, and communicating discrepancies to engineering teams. Detail-oriented, process-driven, and comfortable operating software testing tools and data capture workflows at scale.

Education

Int.MSc Computational Statistics and Data Analytics

VIT University | 2022-2027

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Database Systems, Statistical Modeling, Machine Learning, Computer Networks, Cloud Computing, Distributed Systems

CS50 Programs

Harvard CS50 (Online)

Completed [CS50x](#), [CS50P](#), [CS50AI](#), [CS50SQL](#), and [CS50R](#) covering algorithms, Python, SQL, AI systems, and full-stack development.

Skills

QA & Testing: Test Case Execution, Regression Testing, Functional Testing, Defect Reporting, Bug Tracking, Test Documentation, Root Cause Identification, SLA Adherence, Test Result Reporting

Testing Tools & Data Capture: Python (pytest, unittest), SQL-based data validation, MLflow (experiment tracking & result capture), Postman (REST API testing), Git, Docker

Languages: Python, SQL, Java, JavaScript, R

Platforms & Infrastructure: AWS (Lambda, S3, RDS), PostgreSQL, Redis, Apache Kafka, FastAPI, Linux/Unix

Communication & Reporting: Status Reporting, Discrepancy Escalation, Cross-functional Collaboration, Technical Documentation

Projects

Demand Forecasting System

[GitHub](#)

Python, pytest, MLflow, FastAPI, PostgreSQL, Redis, Docker

- Designed and executed structured test cases across REST API endpoints and data pipeline components; performed regression testing across 4 model variants (Prophet, XGBoost, SARIMA, Ridge) to verify correctness of prediction outputs against expected baselines; documented all test results and discrepancies with reproducible experiment logs in MLflow.
- Implemented automated regression test suites using Python to qualify each software build before production deployment; captured and reported defects with full reproduction steps; escalated critical failures affecting system output accuracy and tracked resolution within defined timelines.

Autonomous Research Agent

[GitHub](#)

Python, pytest, FAISS, ChromaDB, FastAPI, PostgreSQL, Redis, Docker

- Executed functional and regression test cases against REST API endpoints and multi-step agent pipelines; verified system output quality against ground-truth corpora using structured evaluation procedures; captured test results, logged discrepancies, and reported failures with detailed defect descriptions for engineering review.
- Designed and ran offline benchmarking test procedures across prompt strategy variants; systematically compared outputs against expected behavior, documented deviations, and maintained test result logs to support iterative build qualification and quality tracking across release cycles.

Social Media Sentiment Lakehouse

[GitHub](#)

Python, Apache Kafka, Apache Spark Streaming, MLflow, FastAPI, PostgreSQL, Docker

- Executed data capture and validation procedures across real-time streaming pipeline components; performed repetitive regression testing on NLP classification outputs to qualify builds without compromising accuracy; reported classification discrepancies and pipeline failures with accurate defect descriptions and escalation summaries.

Work Experience

Founder

[Shoot the Breeze](#) | 2023 - Present

- Owned end-to-end software quality processes for production applications: authored and executed test cases for each build release, performed regression testing to qualify builds before deployment, documented and escalated defects through structured reporting, and provided individual status reports on test execution progress and issue resolution timelines.

App/Web Developer

[CropSky](#) | VIT-TBI Research & Innovation Hub | 2024
- Present

- Executed functional and regression test cases on REST APIs and backend modules at a university-incubated research startup; used software testing tools for daily data capture and result validation; communicated discrepancies and test failures accurately to engineering leads; collaborated cross-functionally to ensure builds met quality standards before release.

Certifications & Achievements

- [Google Generative AI Leader](#)
- [Google Cloud Computing Foundations](#)
- [FreeCodeCamp Legacy Full Stack](#)
- [OCI 2025 Certified Developer Professional](#)
- AWS [Solutions Architect](#) and [Developer](#)
- [Software Engineer Certification - HackerRank](#)
- Published a [research paper](#) on [stock market analysis and prediction](#) in the 14th proceedings of the [EI Ruha International Conference on Scientific Research](#), pp. 730-740, 2025.
