American Express

Commercial Rating and Underwriting (CRU) Team

Subject: Application for Analyst - Risk Management (Job ID: 26013005)

Dear Hiring Manager,

With a profound respect for American Express's 175-year history and an unwavering commitment to data-driven decision making, I am thrilled to apply for the Analyst - Risk Management position within the Commercial Rating and Underwriting (CRU) team.

The core of risk management lies in accurately understanding data to protect institutional stability. Recognizing that the best analysts must possess both a deep understanding of financial markets and rigorous mathematical abilities, I pursued an **Integrated M.Sc. in Computational Statistics and Data Analytics** at VIT. This foundational training equipped me to dissect macroeconomic trends, build quantitative credit models, and confidently evaluate corporate valuation and forecasting.

My engineering and analytics philosophy is simple: **I never settle**. I thrive on turning complex business problems into actionable financial insights. When I saw the need to accurately predict business cycles, I developed an AI-powered [Demand Forecasting System](#) leveraging rigorous statistical models to estimate confidence intervals and macroeconomic impacts. Similarly, to master financial analytics at scale, I engineered a [Stock Market Data Pipeline](#) capable of analyzing market volatility, anomaly detection, and pricing trends—capabilities directly mirroring the rigor needed to estimate **Probability of Default (PD)** and **Loss Given Default (LGD)**.

My dedication to rigorous quantitative analysis is further evidenced by my peer-reviewed publication on [Stock Market Analysis and Prediction](#), as well as my active contributions to complex open-source repositories. I have successfully resolved 13 issues and submitted 17 pull requests to projects like [Uber's CausalML](#) (focusing on causal inference and statistical modeling), [scikit-learn-contrib](#), and [Grafana](#).

I am highly comfortable with fundamental financial analysis, public agency ratings, and deriving actionable recommendations from complex data sets. An opportunity to interact with front-office sales and business unit risk partners at American Express represents an unparalleled environment to grow my career while ensuring the firm continues to uphold its global banking standards and brand promise of trust and security.

Thank you for considering my application. I would welcome the opportunity to discuss how my computational statistics background, financial pipeline experience, and macroeconomic modeling skills will make an immediate impact within the CRU team.

Sincerely,

Sujith S
