Summary

Detail-oriented and technically-savvy device and application testing practitioner pursuing Int.MSc Computational Statistics and Data Analytics at VIT University (2022-2027). Experienced executing test cases for apps, services, and software features across platforms; logging bugs and failures accurately; tracking resolution against SLAs; and meeting daily productivity and quality targets with a consistent standard of deliverable quality. Skilled at deep-diving application features, comparing functionality across versions to identify changes, and using software tools for validation, analysis, and data capture on a daily basis. Comfortable capturing results, escalating failures, and providing clear status reports. Strong analytical foundation in statistical modeling and software systems; experienced ramping up quickly on new testing procedures, guidelines, and tools.

Education

Int.MSc Computational Statistics and Data Analytics

VIT University | 2022-2027

Coursework: Machine Learning, Deep Learning, Statistical Modeling, NLP, Data Structures & Algorithms, Distributed Systems, Database Systems

CS50 Programs

Harvard CS50 (Online)

Completed [CS50x](#), [CS50P](#), [CS50AI](#), [CS50SQL](#), and [CS50R](#) covering algorithms, AI, Python, and full-stack systems.

Skills

Device & Application Testing: Manual Test Case Execution, Cross-Platform Testing, Device QA, App Feature Deep Dive, Version Comparison & Feature Diffing, Regression Testing, Functional Testing, Component & Feature Testing

QA Operations: Bug Logging & Failure Reporting, SLA Tracking, Daily Productivity & Quality Targets, Deviation Reporting, Status Reporting, Escalation Procedures, Test Instruction Review

Tools & Validation: Software Validation Tools, Data Capture Tools, Postman (API Testing), SQL (Data Validation), Python (Scripting), MLflow, Docker, Linux/Unix, PostgreSQL

Languages & Scripting: Python, SQL, JavaScript, TypeScript, Java, R, Bash/Shell

Cloud & Infrastructure: AWS (Lambda, S3, SageMaker), Docker, CI/CD Pipelines, Linux/Unix

Work Experience

Founder

[Shoot the Breeze](#) |

2023 - Present

- Executed test cases for consumer-facing app features and backend services across platforms; deep-dived core application functionality, compared behavior across software versions to identify changes and regressions, and logged bugs and failures accurately against test instructions.
- Met daily productivity and quality targets executing repetitive test procedures to a high standard; tracked defect resolution against SLAs, escalated failures through defined channels, and provided individual status reports on test execution progress.
- Ramped up quickly on new testing procedures, guidelines, and software validation tools for each product release; used data capture and analysis tools on a daily basis to validate outputs and maintain deliverable quality on AWS-deployed services.

App/Web Developer

[CropSky](#) | VIT-TBI Research & Innovation Hub |

2024 - Present

- Executed functional and regression test cases for consumer-facing web application features and ML-powered backend services; logged bugs and deviations accurately, adhered to defined QA processes, and tracked resolution against SLAs in collaboration with engineering teams.
- Compared application features across versions to identify behavioral changes and regressions; used software tools for daily validation and data capture, communicated results and failures clearly, and shared testing knowledge and best practices with the development team.

Projects

Demand Forecasting System

[GitHub](#)

Python, FastAPI, PostgreSQL, Redis, MLflow, Docker, AWS, Prophet, XGBoost

- Executed test cases for REST API and forecasting service components across model versions; deep-dived service features and compared outputs across retraining cycles to identify behavioral changes; logged failures and tracked resolution using MLflow experiment logs against defined quality targets.

Multi-Agent Business Automation System

[GitHub](#)

Python, CrewAI, LangGraph, LangChain, FastAPI, PostgreSQL, Redis, Docker, AWS, Prometheus

- Executed test cases for agentic workflow components and API features across platform versions; compared feature behavior between releases to identify regressions; logged bugs and failures against test instructions and tracked resolution against SLAs using Prometheus monitoring data.

Recommendation Engine

[GitHub](#)

Python, PyTorch, FAISS, FastAPI, PostgreSQL, Redis, Docker

- Deep-dived recommendation API features and compared personalization output quality across model versions to identify changes; used validation and data capture tools to log accuracy and latency deviations daily, reported findings accurately, and met quality targets across test cycles.

Research & Publications

Stock Market Analysis and Prediction Using Machine Learning

2025

[El Ruha International Conference on Scientific Research](#), pp. 730-740. Executed a rigorous evaluation of 21 ML models (LSTM, GRU, Transformer, ARIMA, XGBoost, LightGBM, RL agents); compared feature and output behavior across model versions, captured and validated results using analysis tools, and documented findings in a peer-reviewed publication.
