Summary

Computational Statistics and Data Analytics student at VIT University (2022-2027) with a peer-reviewed publication applying quantitative ML methods to financial market analysis and prediction. Strong foundation in statistical modeling, financial analytics, and data-driven reporting; experienced in building analytical pipelines that ensure data accuracy, support business planning decisions, and communicate findings to cross-functional stakeholders. Detail-oriented and collaborative, with a demonstrated ability to manage complex analytical workflows, produce accurate financial and operational reports, and work effectively within team environments toward shared deliverables.

Education

Int.MSc Computational Statistics and Data Analytics

VIT University | 2022-2027

Relevant Coursework: Financial Analytics, Statistical Modeling, Database Systems, Data Structures & Algorithms, Machine Learning, Distributed Systems, Cloud Computing, Computer Networks, Software Engineering

CS50 Programs

Harvard CS50 (Online)

Completed [CS50x](#), [CS50P](#), [CS50AI](#), [CS50SQL](#), and [CS50R](#) covering Python, SQL, algorithms, AI, and full-stack development.

Skills

Financial Analytics: Financial Time-Series Analysis, Forecasting & Valuation Modeling, Resource Allocation Analytics, Business Performance Reporting, Variance Analysis, Statistical Correlation Analysis

Statistical & Analytical: Statistical Modeling, Regression Analysis, Feature Engineering, Hypothesis Testing, Benchmarking, Offline Evaluation, MLflow, Statsmodels, Scikit-learn, XGBoost

Data & Reporting: Python, R, SQL, Pandas, NumPy, Power BI, Tableau, PostgreSQL, Excel-compatible data pipelines, dbt, ETL/ELT

Infrastructure & Tools: AWS (S3, RDS, Lambda), FastAPI, Docker, Git, Apache Kafka, Apache Airflow

Collaboration: Cross-functional Stakeholder Communication, Technical Documentation, Status Reporting, Team Delivery

Research & Publications

- **Stock Market Analysis and Prediction using Machine Learning** – [El Ruha International Conference](#), 14th Proceedings, pp. 730-740, 2025. Applied quantitative ML methods to financial time-series data across real-world market regimes; designed feature engineering stages for price, volume, and momentum indicators; benchmarked predictive models to evaluate financial forecasting accuracy and report performance across classification and regression tasks. [\[Code\]](#) [\[Proceedings\]](#)

Projects

Demand Forecasting System

[GitHub](#)

Python, XGBoost, Prophet, Statsmodels, Pandas, PostgreSQL, MLflow, Power BI, Docker

- Built quantitative forecasting models to support resource allocation and inventory planning decisions; engineered financial and operational time-series features (lag, rolling averages, seasonal decomposition, trend indicators); benchmarked 4 model families to identify optimal forecasting approach and reported results with confidence interval estimation for business planning use.
- Designed automated reporting pipelines using MLflow and Power BI to ensure accuracy and reproducibility of forecast outputs; communicated model performance and planning recommendations to cross-functional stakeholders; documented analytical procedures and data lineage to support internal reporting standards.

HR Workforce Intelligence Platform

[GitHub](#)

Python, Scikit-learn, XGBoost, Pandas, PostgreSQL, MLflow, Power BI, Tableau, Docker

- Developed analytical models to support data-driven business planning decisions around human capital – a key financial resource; engineered workforce KPIs covering productivity, cost efficiency, utilization, and engagement to surface actionable insights for organizational decision-making.
- Produced accurate internal reporting dashboards in Power BI and Tableau presenting workforce financial metrics; applied statistical correlation analysis to identify cost drivers and attrition risks; collaborated with cross-functional partners to translate data outputs into business planning recommendations.

Work Experience

Founder

[Shoot the Breeze](#) | 2023 - Present

- Managed financial planning, resource allocation, and operational reporting for a self-founded technology venture; owned end-to-end SDLC, produced accurate performance and status reports for internal review, and communicated analytical findings and business decisions to cross-functional stakeholders; maintained strong attention to detail and accuracy across all deliverables.

App/Web Developer

[CropSky](#) | VIT-TBI Research & Innovation Hub | 2024 - Present

- Developed data-driven analytical modules at a university-incubated research startup; applied statistical analysis to convert research outputs into accurate, production-ready reporting features; collaborated cross-functionally with scientists and engineers, contributing to team-delivered data products that informed business planning and operational decisions.

Certifications & Achievements

- [Google Generative AI Leader](#)
- [Google Cloud Computing Foundations](#)
- [FreeCodeCamp Legacy Full Stack](#)
- [OCI 2025 Certified Developer Professional](#)
- AWS [Solutions Architect](#) and [Developer](#)
- [Software Engineer Certification - HackerRank](#)
