American Express

Marketing, Membership & Investment Optimization (MMIO)
Gurugram, India

Subject: Application for Senior Analyst-Data Analytics (Job ID: 26012766)

Dear Hiring Manager,

Making membership an indisputable competitive advantage requires a rigorous **test-and-learn ecosystem**. When decisions impact the U.S. Consumer Services suite, they must be advised by robust **experimentation, causal inference, and discovery analytics**. Armed with an Int.MSc in **Computational Statistics** and deep expertise in **A/B testing** and **big data programming languages**, I am thrilled to apply for the **Sr Analyst, US Consumer CXO Experimentation Analytics** role.

My passion lies in translating complex business questions into **testable hypotheses** and delivering **actionable insights**. While engineering my **Demand Forecasting System**, I leveraged advanced statistical methodologies to execute **discovery analytics** and evaluate **incrementality**. By querying and analyzing massive datasets using Python and SQL, I developed **causal inference frameworks** that optimized acquisition strategies and enhanced customer experience. This structured approach to problem-solving directly aligns with the MMIO team's mandate to drive profitable growth through personalized investment decisions.

My commitment to cultivating a test-and-learn culture extends deeply into the broader engineering community. My dedication to rigorous quantitative analysis is evidenced by my peer-reviewed publication on **Stock Market Analysis and Prediction using ML**. Furthermore, by successfully resolving 13+ issues and submitting 17+ pull requests to prominent open-source repositories—most notably **Uber's CausalML** (a premier library specifically focused on **causal inference** and **uplift modeling**)—I have demonstrated my proven ability to analyze complex data sets and innovate on a global scale.

I am eager to bring my strong analytical foundation in Statistics and quantitative methods to American Express to help optimize your acquisition funnels. I welcome the opportunity to discuss how my expertise in experimentation frameworks and causal inference can make an immediate impact on your team.

Thank you for your time and consideration.

Sincerely,

Sujith S
