## American Express

Credit and Fraud Risk (CFR) Analytics & Data Science CoE

### Subject: Application for Analyst/Sr. Analyst - Risk Management (Job ID: 26012798)

Dear Hiring Manager,

A single decision can have many outcomes. When that decision affects millions of customers, it must be advised by groundbreaking analytics and data science. As a candidate pursuing an Int.MSc in Computational Statistics and Data Analytics, with deep expertise in machine learning and big data solutions, I am thrilled to apply for the Analyst/Sr. Analyst position within the CFR Analytics & Data Science CoE team.

I am passionate about solving real-world business problems by transforming large amounts of data into actionable economic logic. While developing my **Demand Forecasting System**, I leveraged advanced machine learning algorithms (XGBoost, Statsmodels) to model macroeconomic trends and predict business growth. I successfully derived intelligent business insights from massive, unstructured datasets and structured those findings to drive profitable actions. This directly mirrors the analytical rigor required to target the right customers, underwrite them effectively, and drive intelligent decisions across the Amex network.

Furthermore, I thrive in environments that challenge the status quo. To combat high latency in financial analytics, I engineered a **Real-Time Stock Market Data Pipeline**. By utilizing big data technologies like Apache Kafka and PostgreSQL, I analyzed high-throughput financial data to drive scalable, intelligent business insights. Managing these end-to-end analytical solutions required operating effectively within agile methodologies, partnering with diverse stakeholders, and driving complex project deliverables to achieve business results.

My commitment to innovation and analytics extends deeply into the broader engineering community. By successfully resolving 13+ issues and submitting 17+ pull requests to prominent open-source repositories—most notably **Uber's CausalML** (a premier statistical causal modeling library)—I have demonstrated my ability to maintain an external lens, learn quickly, and integrate with cross-functional partners on a global scale.

I am eager to bring my strong analytical foundation in Economics, Statistics, and Data Science to American Express to help drive profitable credit business actions. I welcome the opportunity to discuss how my expertise in machine learning and big data can make an immediate impact on your team.

Thank you for your time and consideration.

Sincerely,

Sujith S
