Deloitte

Audit & Assurance - Data and Analytics
Hyderabad / Gurugram, India

Subject: Application for Assistant - Data and Analytics (Requisition code: 360599)

Dear Hiring Manager,

The future of auditing is being redefined by cutting-edge data analytics, where the ability to **reveal hidden patterns, detect anomalies, and build compelling data narratives** is essential for assuring data integrity and driving strategic decisions. As a candidate pursuing an Int.MSc in Computational Statistics and Data Analytics, with deep expertise in **Python, SQL, PySpark, and advanced visualization platforms like Tableau and Power BI**, I am thrilled to apply for the Assistant position within the Audit & Assurance team at Deloitte.

I am deeply passionate about engineering robust data pipelines and turning unstructured data into actionable intelligence. While building my **ETL Pipeline for E-Commerce Analytics**, I processed over **500,000 transaction records** by extracting, cleaning, and transforming massive datasets into reliable schemas using Apache Airflow and Pandas. By constructing **interactive Power BI and Tableau dashboards**, I empowered stakeholders to instantly identify operational outliers and revenue anomalies. This aligns directly with Deloitte's vision of utilizing analytics and visualization to deliver a dynamic and insightful picture to clients.

Furthermore, my commitment to data precision and rigorous problem-solving is demonstrated through my extensive contributions to the open-source community across prominent organizations including **Uber, scikit-learn-contrib, Grafana, and Hack Club**. For instance, I successfully diagnosed and resolved structural anomalies in data processing pipelines for **Uber's CausalML (PR #1031)**, **eliminating targeted variances** and improving modeling accuracy. I also prevented unstable calibration estimates in **scikit-learn-contrib (PR #125)** and built critical telemetry data migration paths for **Grafana (PR #413)**. You can view a comprehensive log of these efforts here: **My Open-Source Portfolio**.

I am eager to bring my analytical rigor, inquisitiveness, and strong collaborative skills to Deloitte. I welcome the opportunity to discuss how my expertise in **Python, SQL, and data visualization** can help your engagement teams transform audit delivery models and shape tomorrow's reporting successes.

Thank you for your time and consideration.

Sincerely,

Sujith S
