Summary

Penultimate-year Computational Statistics and Data Analytics student at VIT University (2022-2027) with a peer-reviewed publication on ML applied to financial time-series forecasting. Experienced in the full software development life cycle – requirements gathering, design, implementation, testing, documentation, deployment, and ongoing support – for internal and customer-facing enterprise applications. Built and integrated web-scale data pipelines processing millions of events per day, developed financial planning and analysis platforms, and delivered production-grade business applications using Python, Java, and cloud platforms including Google Cloud and AWS. Proven ability to partner with cross-functional stakeholders to translate business requirements into reliable, maintainable software.

Education

Int.Msc Computational Statistics and Data Analytics

VIT University | 2022-2027

Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Software Engineering, Database Systems, Computer Networks, Financial Analytics, Cloud Computing, Statistical Modeling

CS50 Programs

Harvard University | CS50

Completed [CS50x](#), [CS50P](#), [CS50AI](#), [CS50SQL](#), and [CS50R](#) covering Python, SQL, algorithms, AI, and full-stack application development.

Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, R

Cloud Platforms: Google Cloud Platform (GCP), AWS (Lambda, S3, RDS, EKS, EventBridge), Azure, Docker, Kubernetes, Terraform

Application Development: FastAPI, Node.js, REST APIs, WebSockets, React, Next.js, Full-Stack SDLC, CI/CD, Integration Testing, UAT, Documentation

Data Engineering & Pipelines: Apache Kafka, Apache Spark, Apache Airflow, dbt, ETL, PostgreSQL, Redis, Delta Lake, Web-Scale Data Processing

Enterprise & Business Systems: Financial Planning & Analysis, Business Process Automation, Requirements Gathering, Stakeholder Management, Vendor Integration, Production Support

Projects

Cloud Cost Optimization Dashboard

[GitHub](#)

Python, FastAPI, GCP SDK, AWS Boto3, Azure SDK, Scikit-learn, Prophet, PostgreSQL, Redis, Docker, Prometheus, Grafana

- Built a FinOps platform integrating native billing APIs across GCP, AWS, and Azure; delivered unified financial planning dashboards, budget monitoring, Kubernetes cost allocation, idle resource detection, rightsizing recommendations, and seasonal cost forecasting models supporting enterprise-scale financial analysis and infrastructure governance.

Real-Time Stock Market Data Pipeline

[GitHub](#)

Python, Apache Kafka, Spark Streaming, Apache Airflow, dbt, FastAPI, PostgreSQL, Redis, Docker, Prometheus, Grafana

- Engineered a web-scale financial data pipeline processing millions of market events per day; built high-throughput Kafka ingestion, distributed Spark Streaming transformations, Airflow-orchestrated ETL workflows, dbt warehouse models, anomaly detection, and REST API endpoints for real-time financial reporting and business intelligence.

Smart Local Business Inventory & Billing System

[GitHub](#)

React, Next.js, TypeScript, Node.js, FastAPI, PostgreSQL, Redis, AWS S3, Docker, Prometheus, Grafana

- Developed a production-grade internal business application covering product catalog management, GST-enabled invoice generation, tax calculation, payment tracking, customer management, and KPI dash-

boards; implemented real-time inventory synchronization via Redis Pub/Sub and WebSockets, conducted integration and regression testing, and maintained end-to-end documentation across the full SDLC.

ETL Pipeline for E-Commerce Analytics

[GitHub](#)

Python, Apache Airflow, dbt, FastAPI, PostgreSQL, Redis, Celery, Pandas, Docker, Prometheus, Grafana

- Designed production ETL pipelines integrating APIs, CSV sources, transactional databases, and payment gateways; built dbt star schema warehouse models generating financial KPIs – revenue analytics, CLV, conversion rates – with data quality validation, automated reporting dashboards, and comprehensive pipeline monitoring.

Work Experience

Founder

[Shoot the Breeze](#) | 2023 - Present

- Led full SDLC – requirements gathering, system design, implementation, integration testing, UAT, documentation, and ongoing support – for production internal applications integrating third-party services and vendor APIs; set technical direction, maintained deployment pipelines, and delivered repeatable quality across Python and FastAPI-based backend infrastructure.

App/Web Developer

[CropSky](#) | VIT-TBI Research & Innovation Hub | 2024
- Present

- Partnered with cross-functional research scientists and engineers to gather stakeholder requirements, design scalable REST API and backend architectures, and deliver production-ready features on repeatable schedules; contributed to system road maps, regression testing, and technical documentation at a university-incubated startup.

Research & Publications

- **Stock Market Analysis and Prediction using Machine Learning** – [El Ruha International Conference](#), 14th Proceedings, pp. 730-740, 2025. Engineered end-to-end ML pipelines for financial time-series forecasting; designed feature engineering stages and benchmarked predictive models across real-world market regimes. [\[Code\]](#) [\[Proceedings\]](#)

Certifications & Achievements

- [Google Generative AI Leader](#)
- [Google Cloud Computing Foundations](#)
- [FreeCodeCamp Legacy Full Stack](#)
- [OCI 2025 Certified Developer Professional](#)
- AWS [Solutions Architect](#) and [Developer](#)
- [Software Engineer Certification - HackerRank](#)
